

Travel Diary - Production API v1

Documentation

Complete Reference: Versioned Endpoints (/api/v1), Headers, Request Bodies & Parameters

Global Configuration & API Versioning

- Base Server URL:** http://localhost:5000/api/v1
- Backwards Compatibility:** http://localhost:5000/api/... (automatically forwards to v1)
- Authentication:** Protected endpoints require an accessToken stored in HTTP cookies
(accessToken=<jwt_token>).
- Content-Types:** application/json (JSON Data) & multipart/form-data (File Uploads)

1. Authentication Routes (/api/v1/auth)

Method	Endpoint Path	Auth	Content-Type	Description
POST	/api/v1/auth/register	No	application/json	Register account (Sends registration email verification OTP)
POST	/api/v1/auth/verify-email-otp	No	application/json	Verify registration OTP code
POST	/api/v1/auth/resend-email-otp	No	application/json	Resend email registration verification OTP
POST	/api/v1/auth/login	No	application/json	Authenticate user (Requires verified email)

POST /api/v1/auth/register

Registers a user (sets isEmailVerified: false) and sends a 6-digit OTP code to the email.

REQUEST BODY (JSON):

```
"username": "johndoe"
```

```
"email": "john@example.com"
```

```
"password": "secret123",
```

```
"fullName": "John Doe",
```

```
"accountType": "personal"
```

RESPONSE (JSON):

```
"success": true,
```

```
"message": "Registration successful! OTP code sent to your email address."
```

POST /api/v1/auth/verify-email-otp

Verifies registration OTP code and marks user email as verified.

REQUEST BODY (JSON):

```
"email": "john@example.com"
```

```
"otp": "123456"
```

RESPONSE (JSON):

```
"success": true
```

```
"message": "OTP verified successfully"
```
